

Smart Automation
Solutions with N8N

n8n

Free your business from the workload – with smart agent-based automation

In today's digital world, automation is the key to efficiency, time savings, and rapid growth. Our N8N implementation services allow businesses to eliminate repetitive tasks, connect isolated systems, and turn manual processes into automated workflows – without the need for complex development.

What is N8N?

N8N is a powerful, open, and flexible process automation platform with agents, supporting over 400 integrations with systems, services, and applications (such as CRM, ERP, email, API, databases, and more). It provides full control over processes and data, with precise customization to match your organization's needs. We can develop custom solutions for integrating systems that are not part of N8N's existing toolkit.

Our Services

- Custom Automation Process Design

Designing and building automated workflows tailored to your organization's unique needs.

- Integration with Third-Party Systems Connecting CRM and ERP systems.

- CRM and ERP Process Automation

Automating data synchronization, lead management, invoice generation, order processing, reporting, and more.

- Integration of IoT Data and External Data Streams

Connecting devices, sensors, and internal systems for monitoring, reporting, or automated process activation.

FAQs

- ❓ The platform is open source – does that mean no licensing fees?
 - ✅ Installing on the organization's server is free of charge. You can also use N8N's cloud service, which has a subscription cost.
- ❓ Can N8N be installed on Linux or Windows-based servers?
 - ✅ Yes.
- ❓ Can it connect to systems not in N8N's default toolkit?
 - ✅ Yes. If the target system has an API, it can be connected.
- ❓ Is N8N SOC2 compliant?
 - ✅ Yes.

Example Use Cases

1

Digital Forms for Customer Data Collection

Sending digital forms to customers for data collection and managing the collection process.

2

Digital Document Signing

Managing electronic signature workflows for documents.

3

Customer Status Updates

Informing customers via email, WhatsApp, or Telegram about the shipping status of a container or other processes.

Customers can request and receive specific status updates.

4

Automated Data Transfer and Updates Between Systems

Syncing data between internal systems or B2B partners.

5

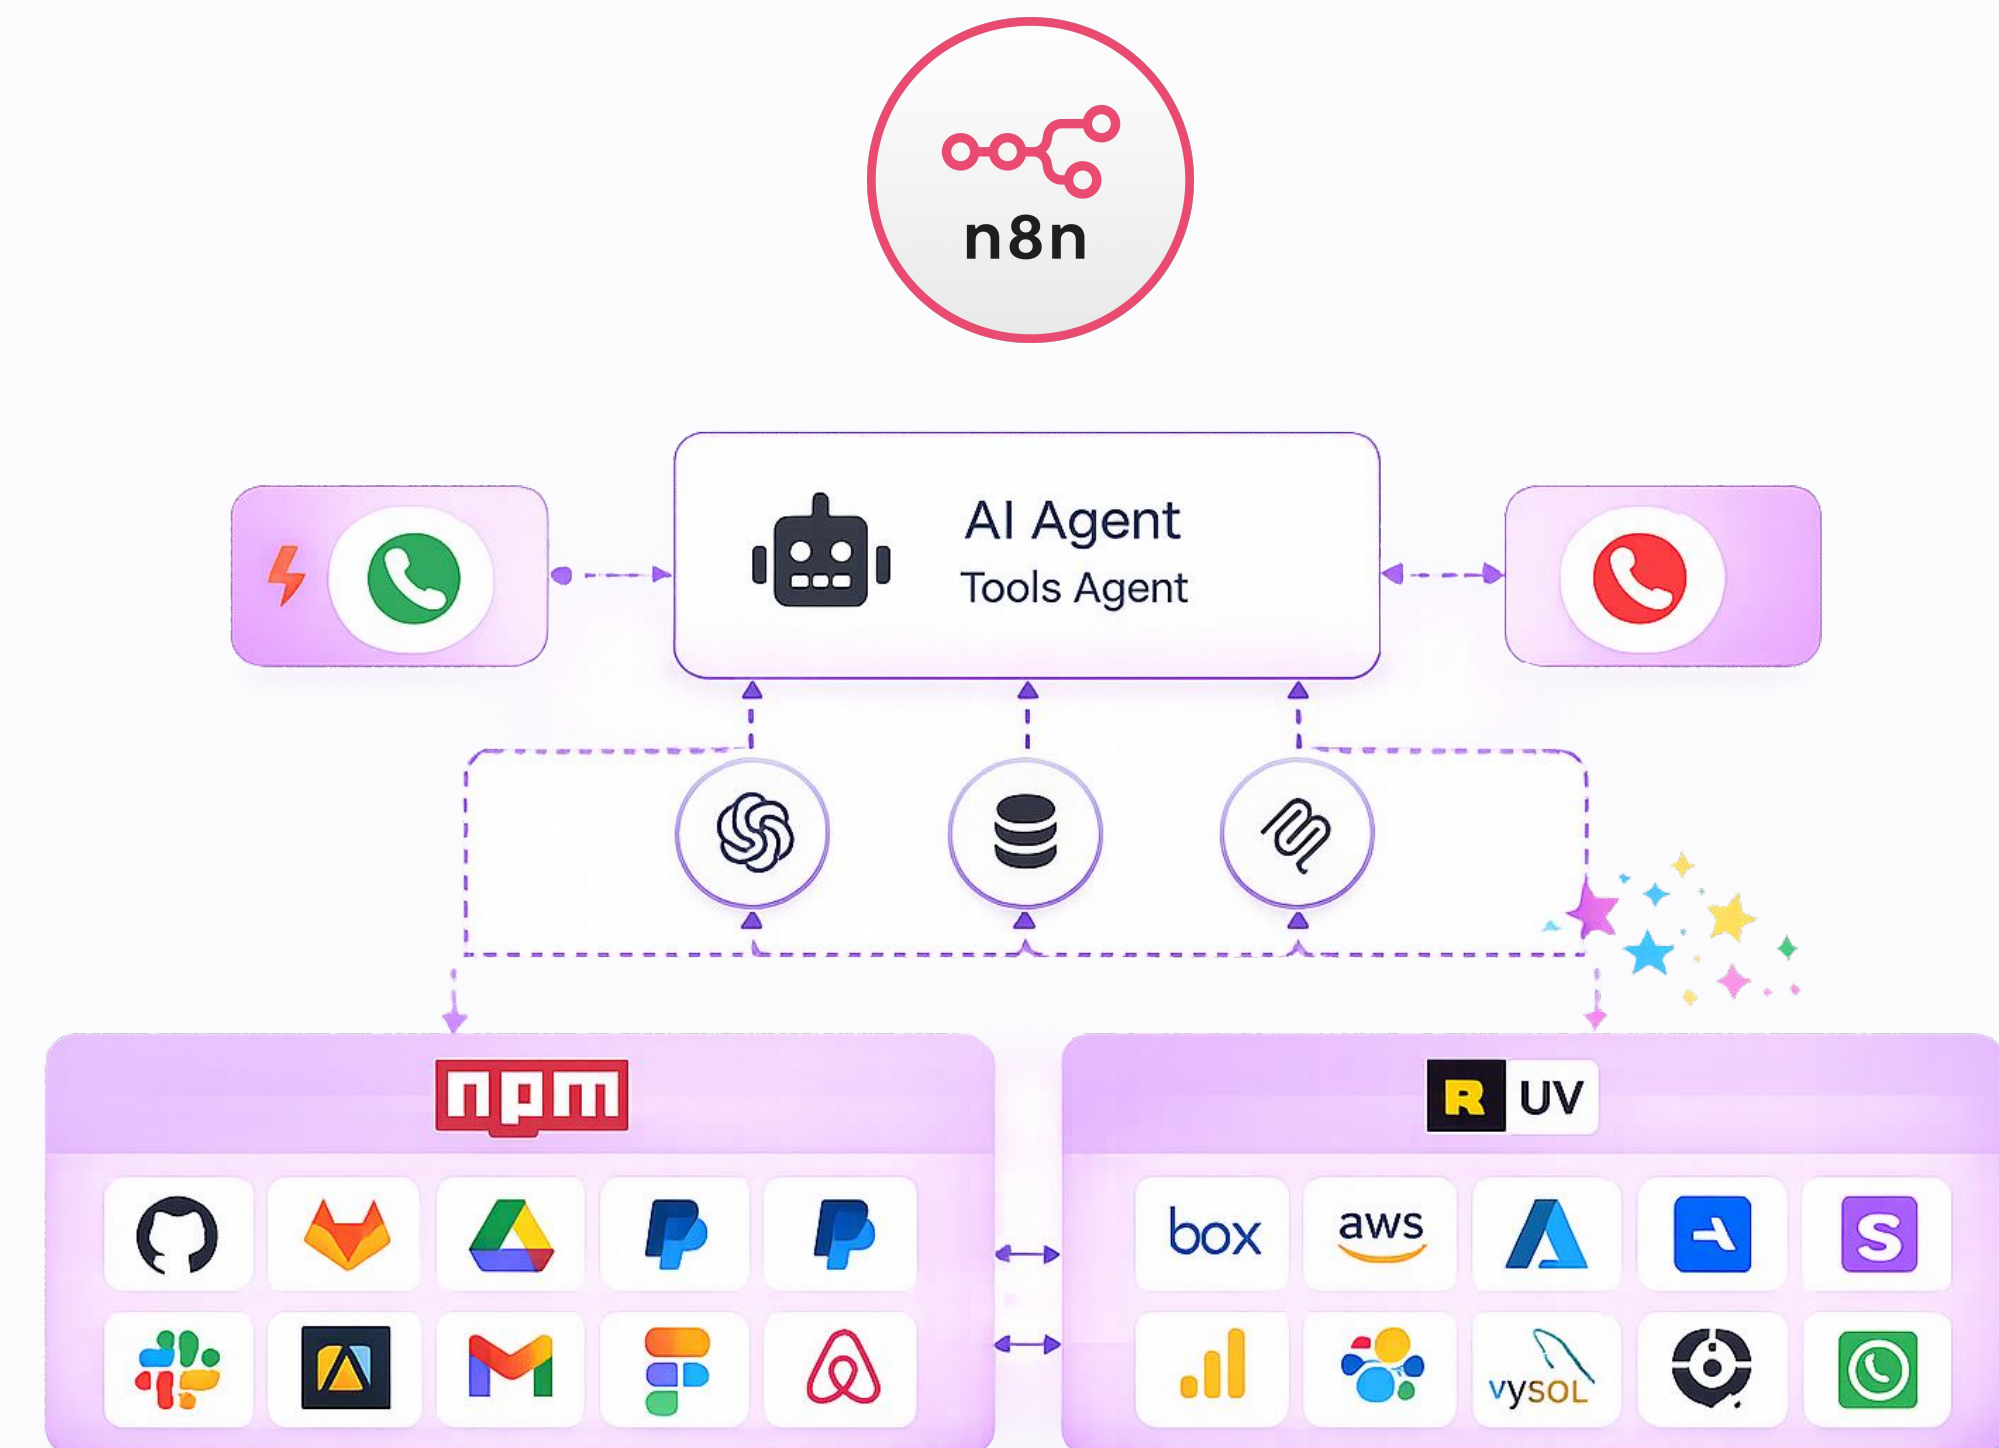

Process Management

Managing internal/external workflows involving multiple systems.

6

Customer Appointment Scheduling via WhatsApp/Telegram

Automating the scheduling of meetings with customers.
